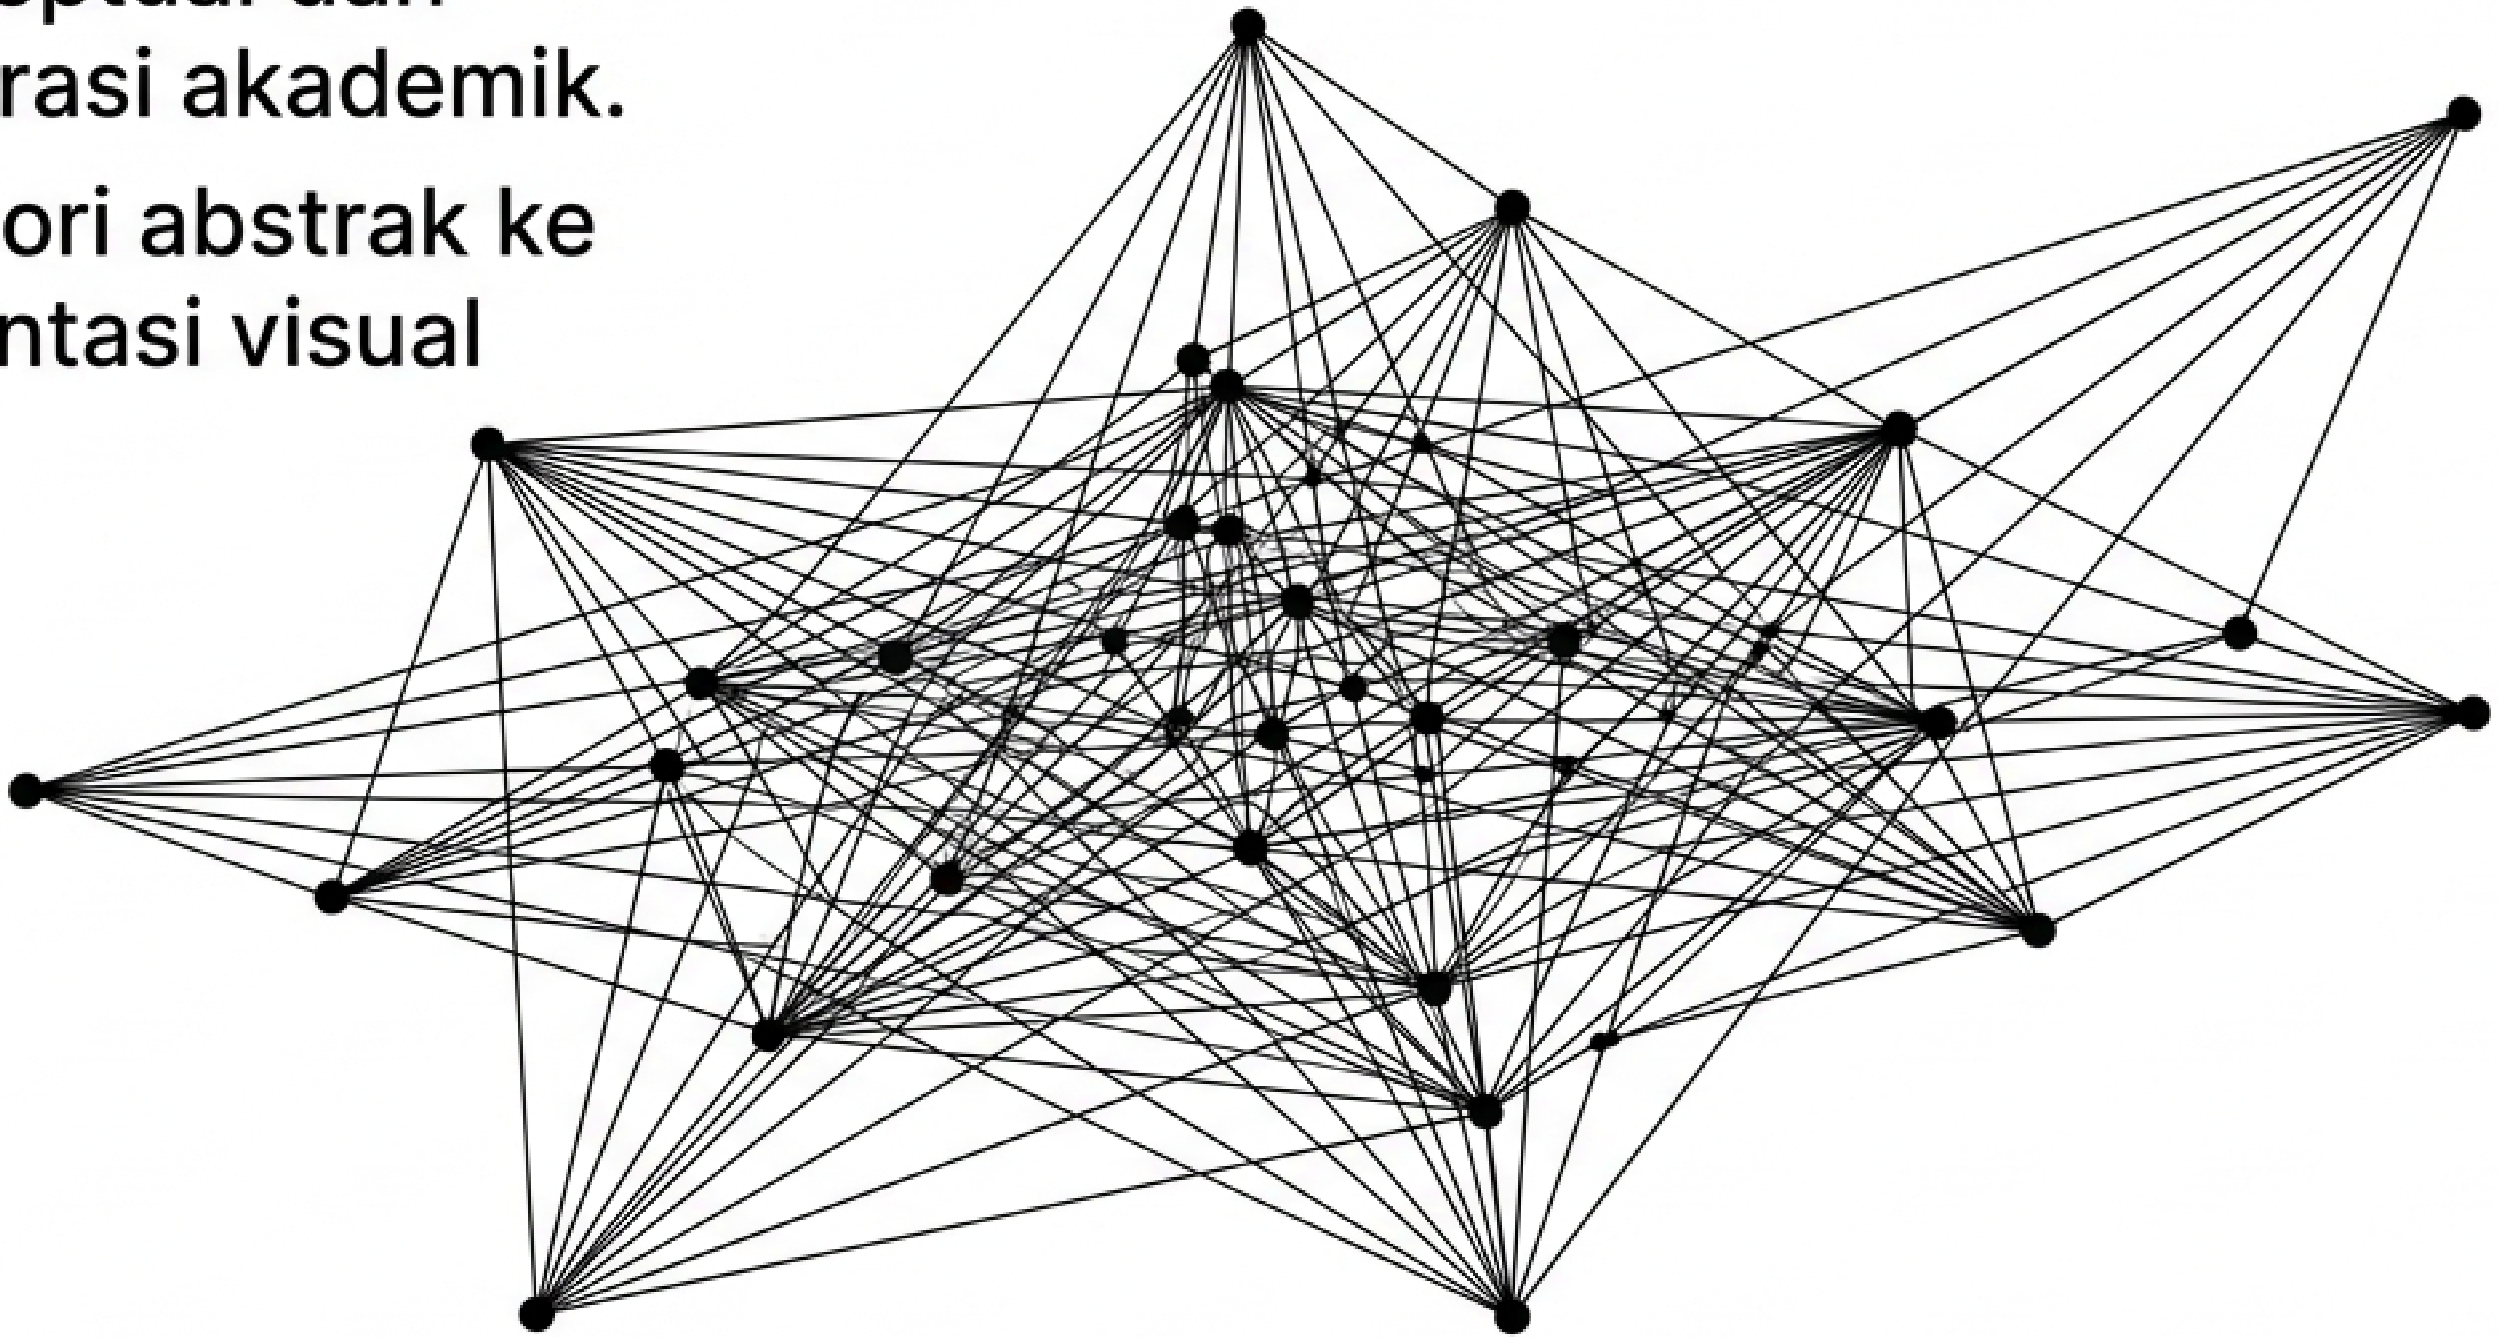
[VISUALIZATION MATRIX // VECTOR WIREFRAME // ISOMETRIC GRID]

Taksonomi Visual Rekayasa Sistem Cerdas

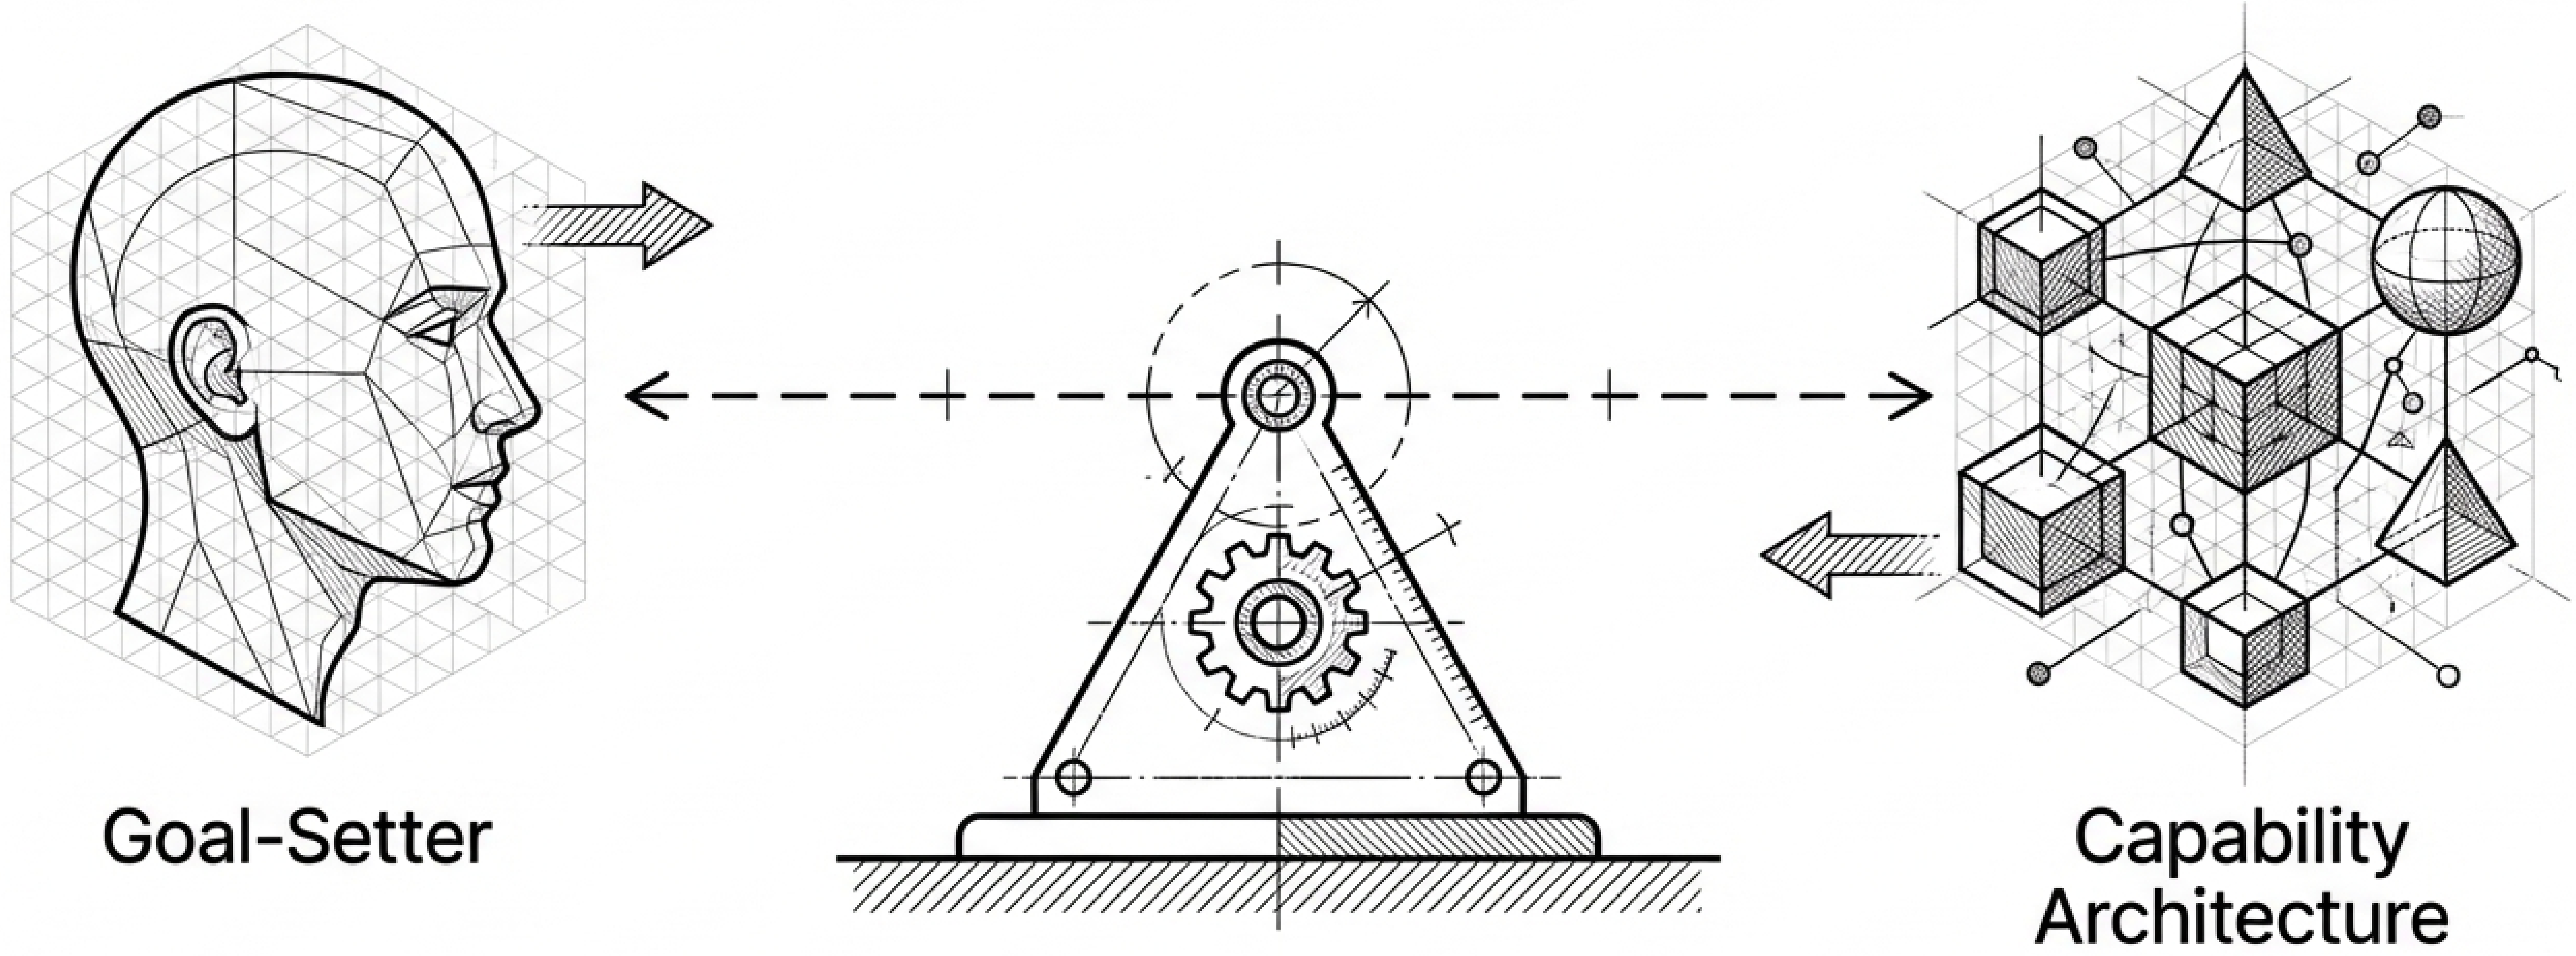
- Panduan konseptual dan struktural ilustrasi akademik.
- Merangkum teori abstrak ke dalam representasi visual yang konkret.



[PATENT PENDING // ENGINEERING MANIFESTO // STRICTLY MONOCHROME]

NotebookLM

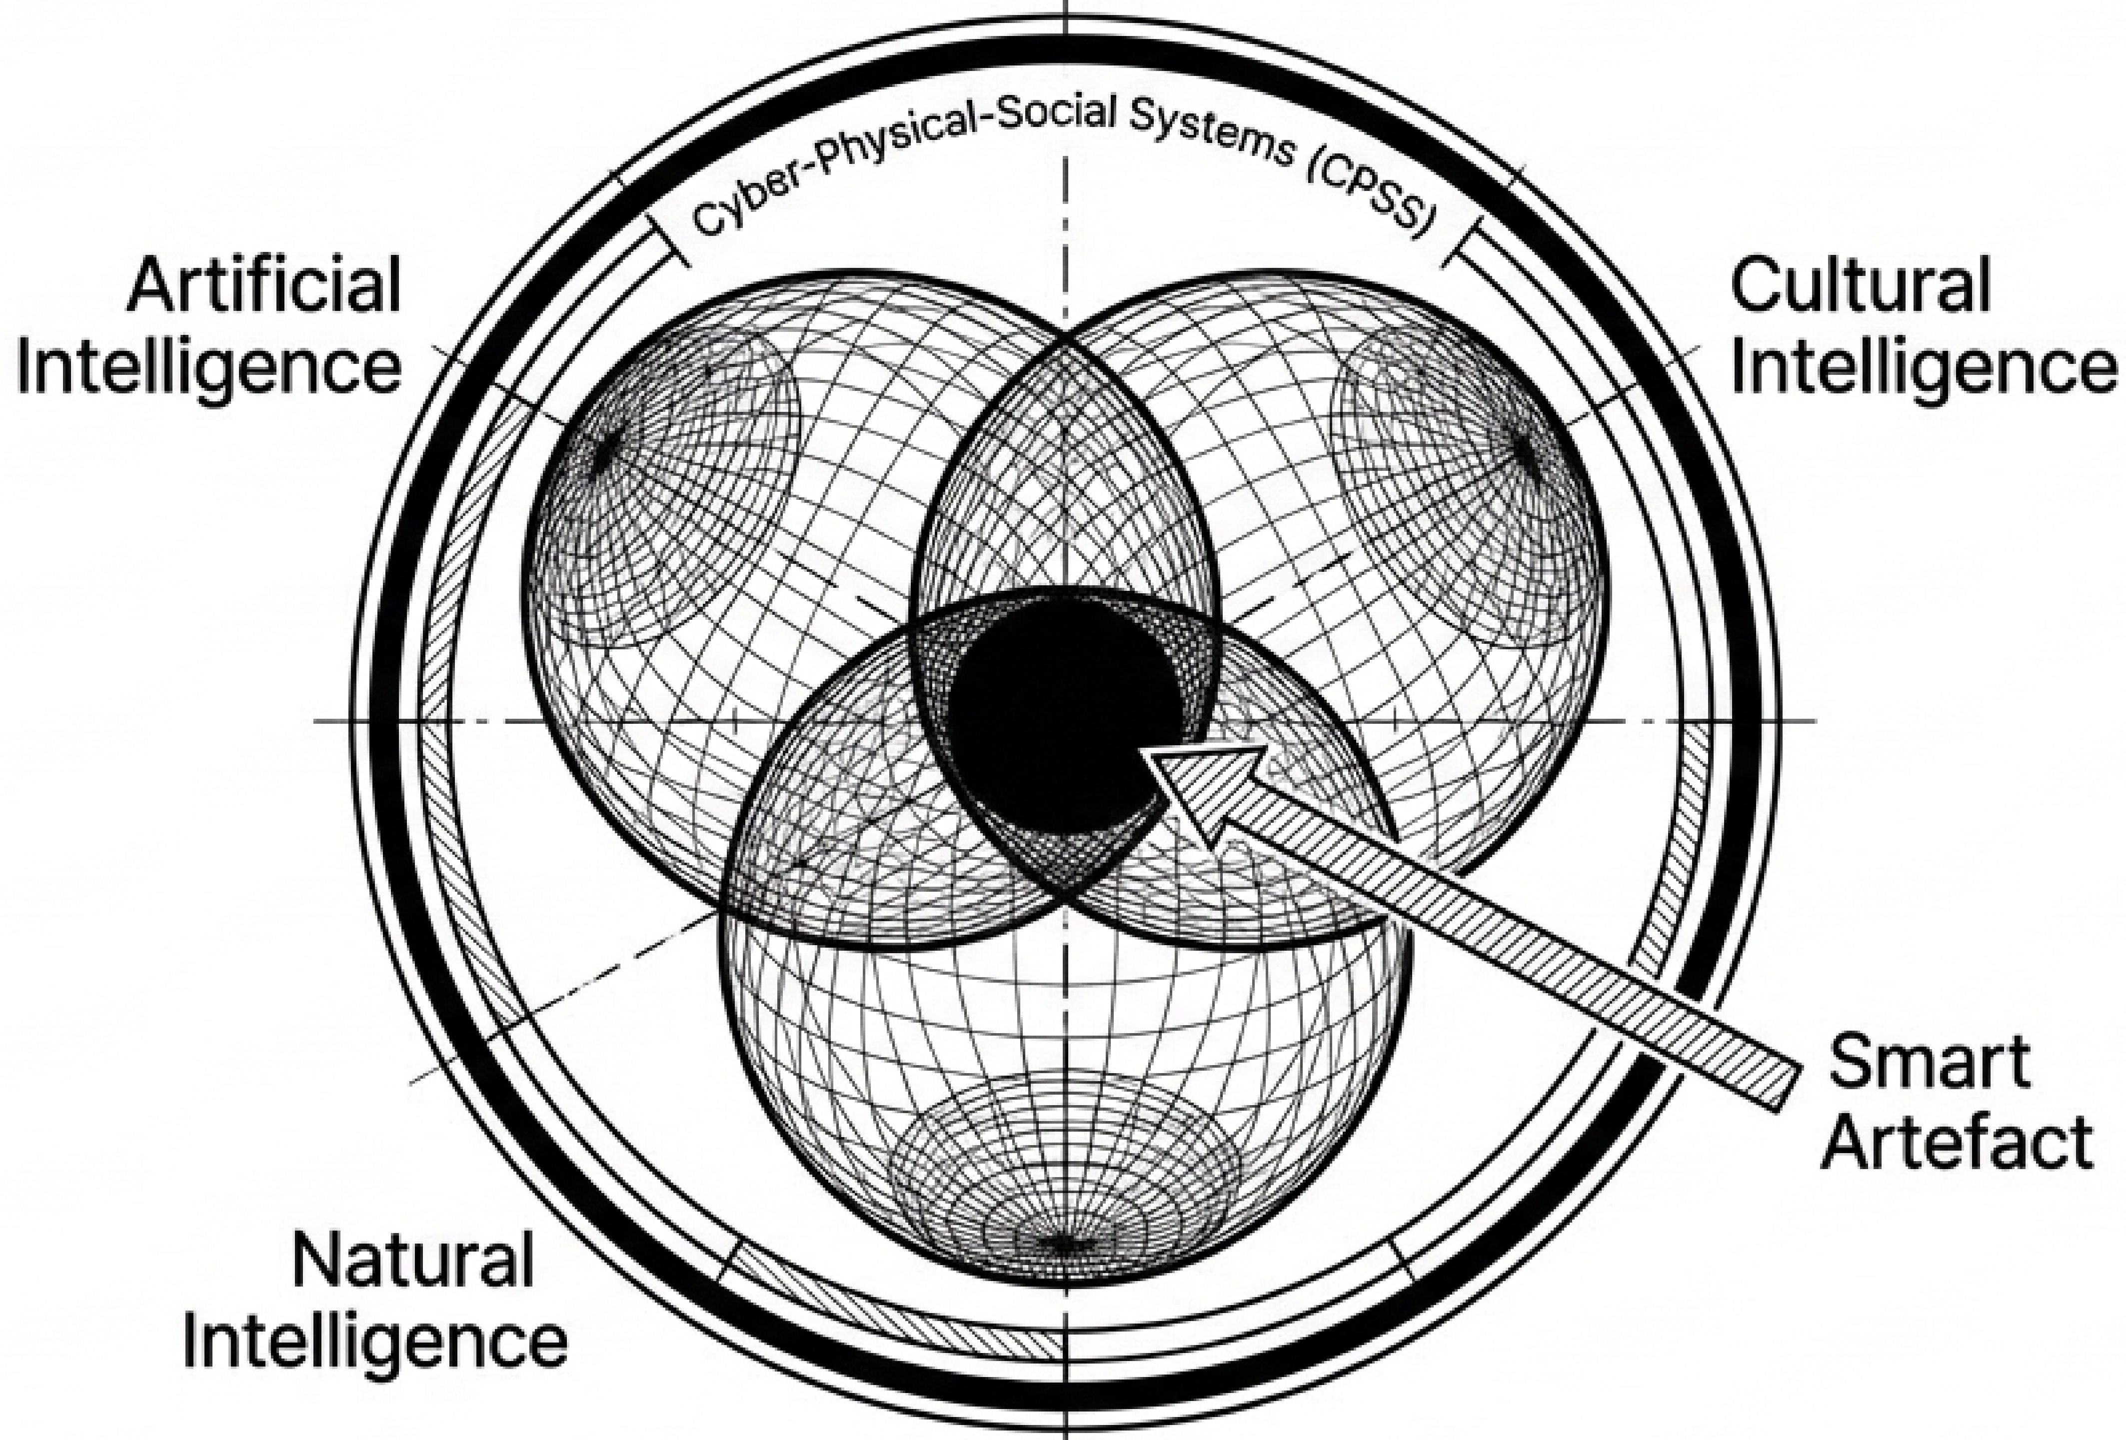
Evolusi menuju ko-kreasi naratif antara manusia dan mesin



PROMPT EXECUTION: "A conceptual academic textbook illustration shewing the transition from Man-Computer Symbiosis to Narrative Co-Creation in the AI era. The inage sheuld highlight an equal cellaboration between a human figure representing a goal-setter and an intelligent AI systen representing a capability architscture. Style: technical vecter graphic, clean layout, grounded engineering aesthetic, mininal text."

NotebookLM

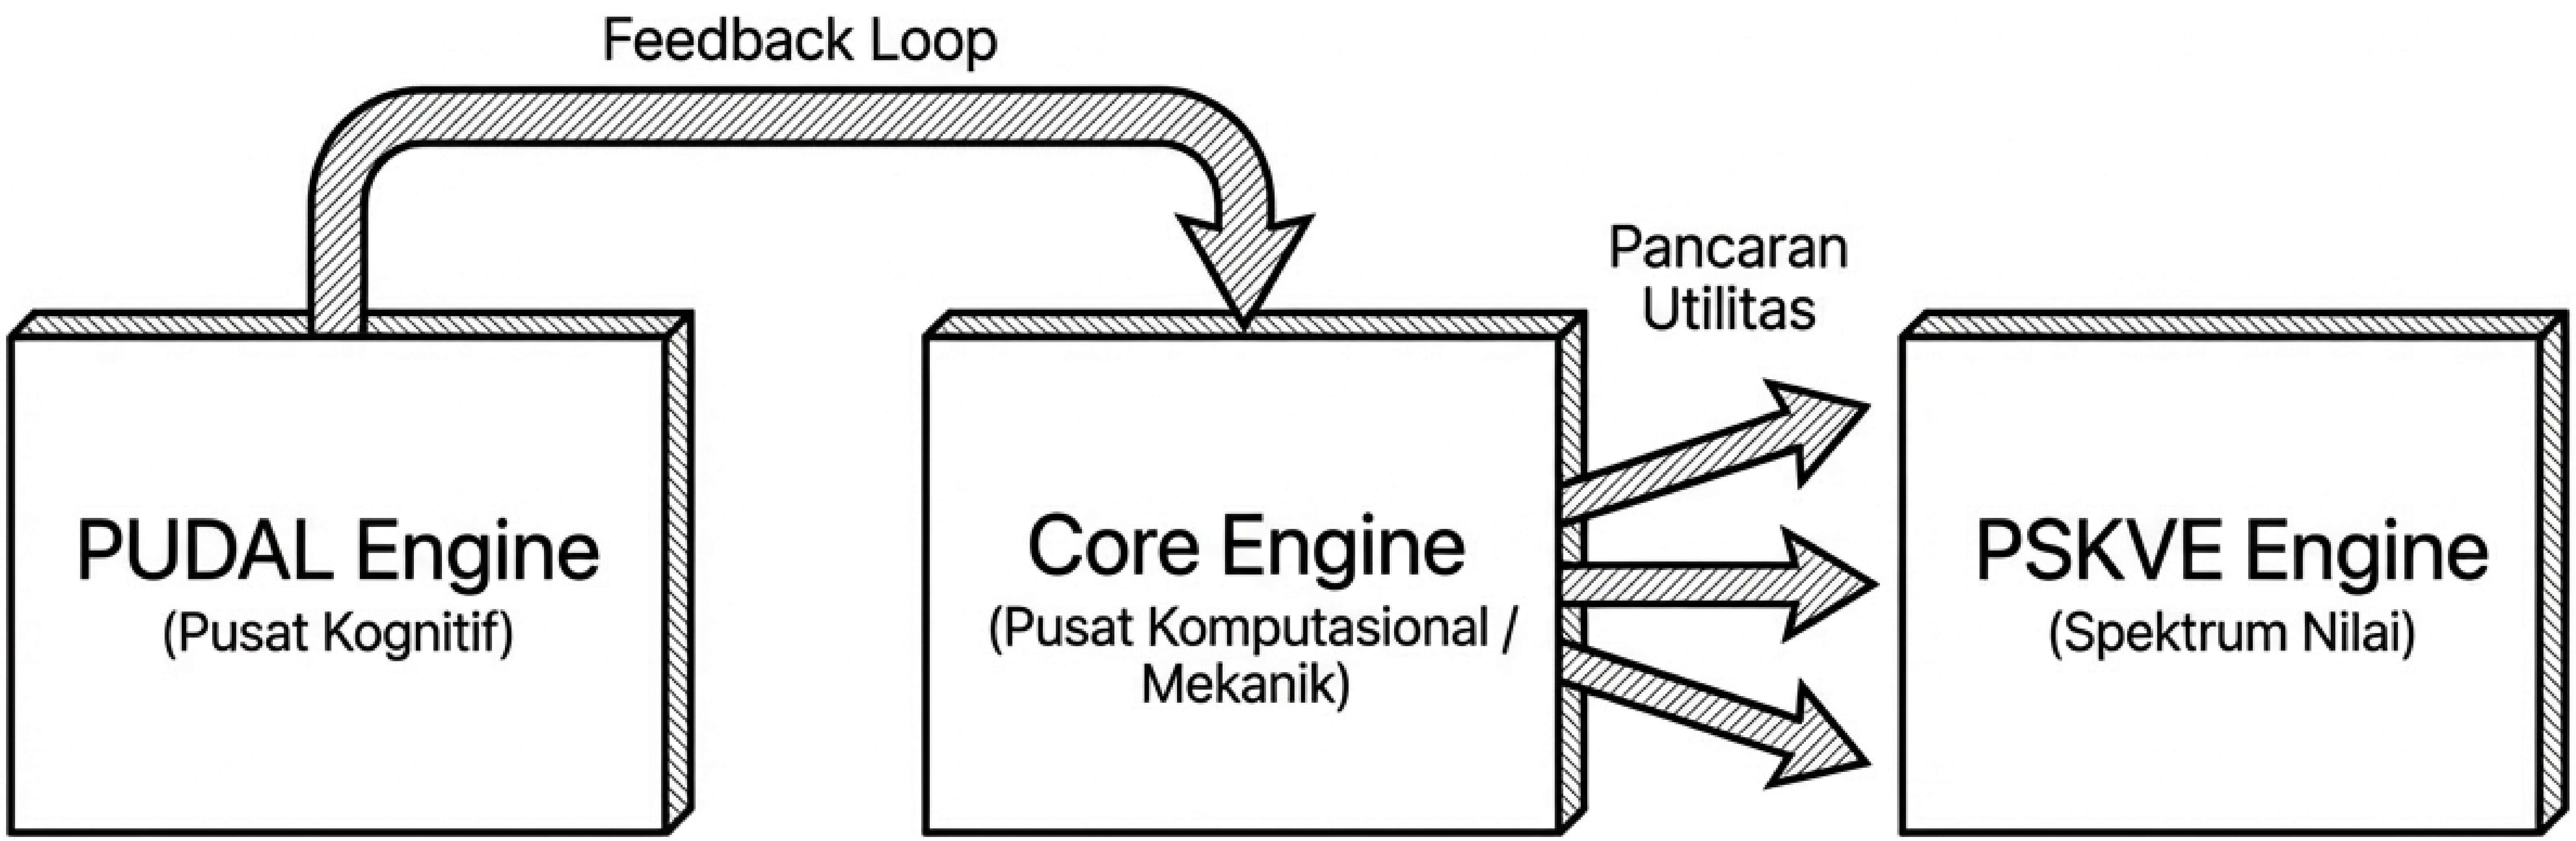
Integrasi kecerdasan membentuk anatomi ekosistem



PROMPT EXECUTION: "A conceptual 3D Venn diagram or parametric chart showing the integration of Cyber-Physical-Social Systems (CPSS) and the convergence of Triune Intelligence. The diagram should have three main intersecting axes centering on a core labeled Smart Artefact. Style: abstract technical graphic, systems engineering textbook aesthetic, sharp lines."

NotebookLM

Struktur kohesi menggerakkan utilitas artefak cerdas



PROMPT EXECUTION: "An architectural system diagram showing the cohesion structure of a Smart Artefact. The diagram must feature three main blocks: PUDAL Engine (cognitive core) sending a feedback loop to the Core Engine (mechanical/computational core), which then radiates utility across a spectrum labeled PSKVE Engine. Style: technical schematic, clean academic layout, high contrast."

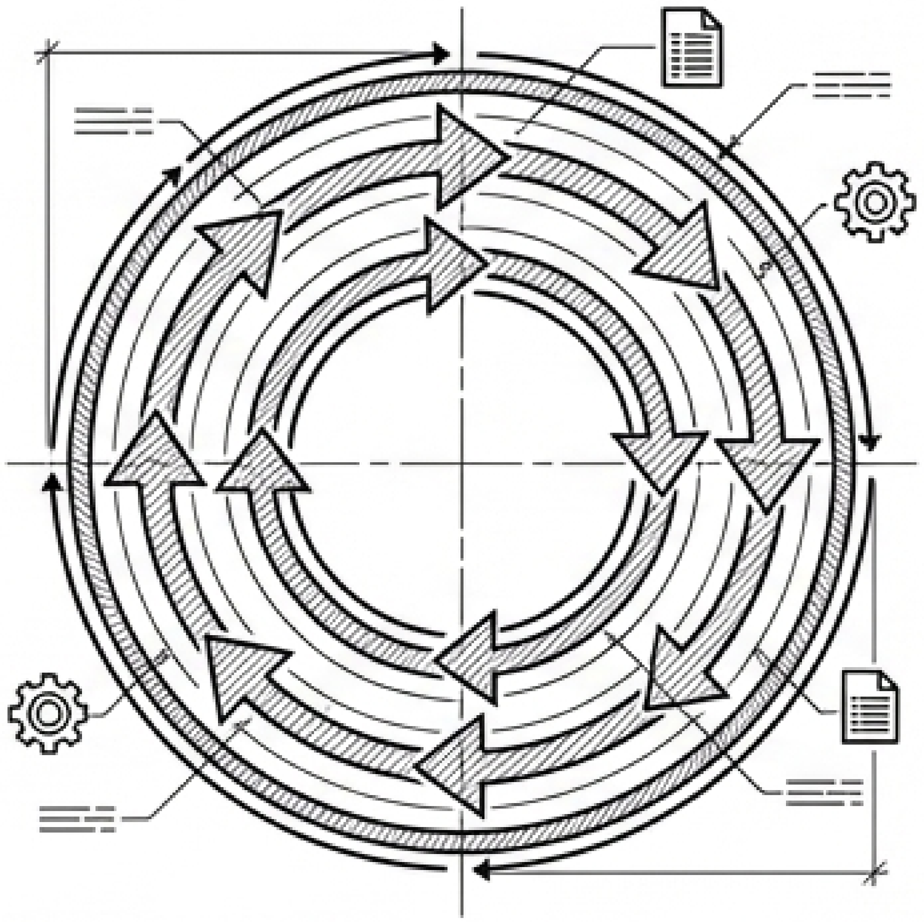
NotebookLM

PRBMPT EXECUTION: A diagnostic cewparison matrix slide contrasting 'PUDAL ENGINE' and 'PSKVE ENGINE' based on provided content and schematic styles. STYLE: Architect's blueprint, monochrome, technical graphic, Swiss design aesthetic, high contrast, sharp lines.

Dualitas mesin: Kognisi internal versus transaksi eksternal

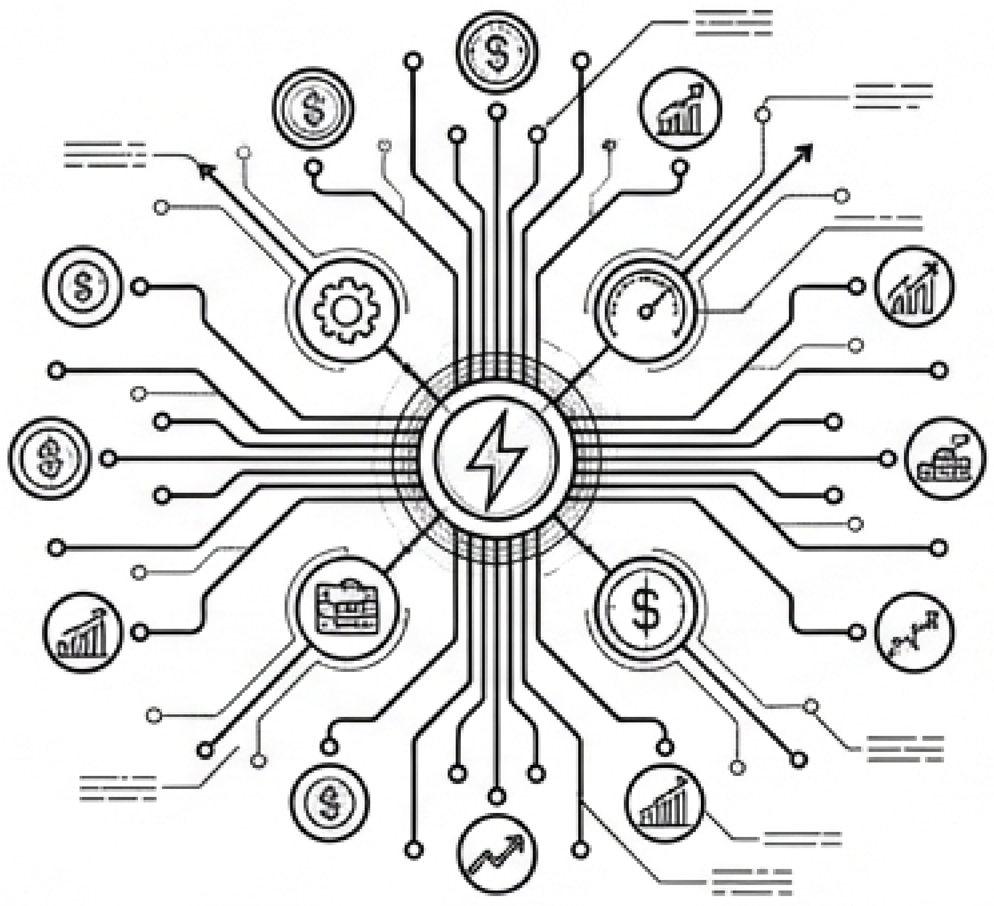
PUDAL ENGINE

- **Domain:** Internal / Kognitif
- **Fungsi:** Memproses data lingkungan menjadi keputusan.
- **Output:** Pembelajaran mandiri (Learn).
- **Bentuk:** Siklus rotasi sirkular tertutup.



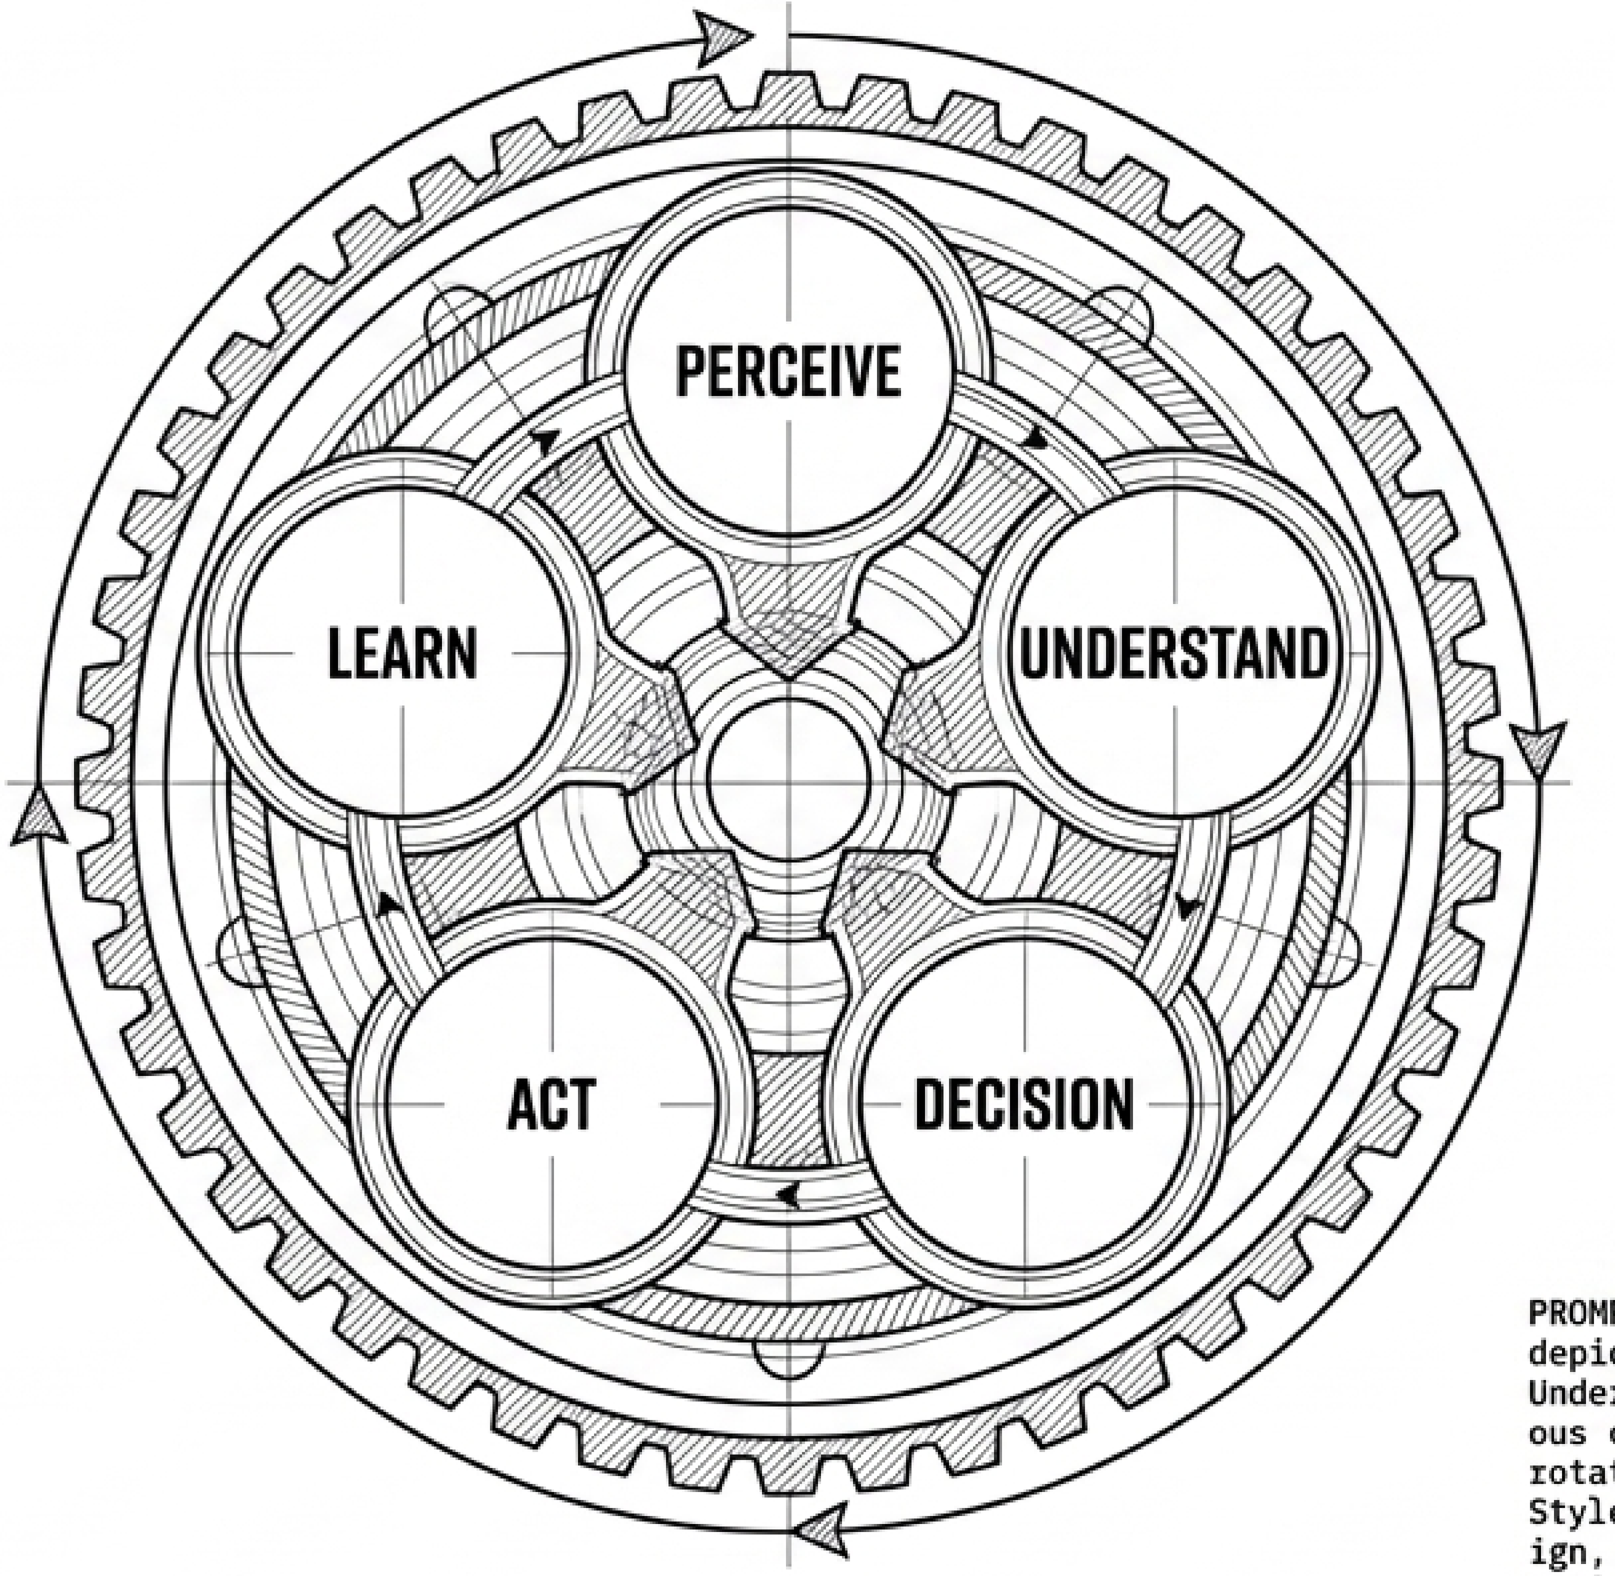
PSKVE ENGINE

- **Domain:** Eksternal / Transaksional
- **Fungsi:** Mengonversi utilitas mesin menjadi nilai nyata.
- **Output:** Efisiensi, finansial, penghematan (Value).
- **Bentuk:** Jaringan sirkuit topologi terbuka.



NotebookLM

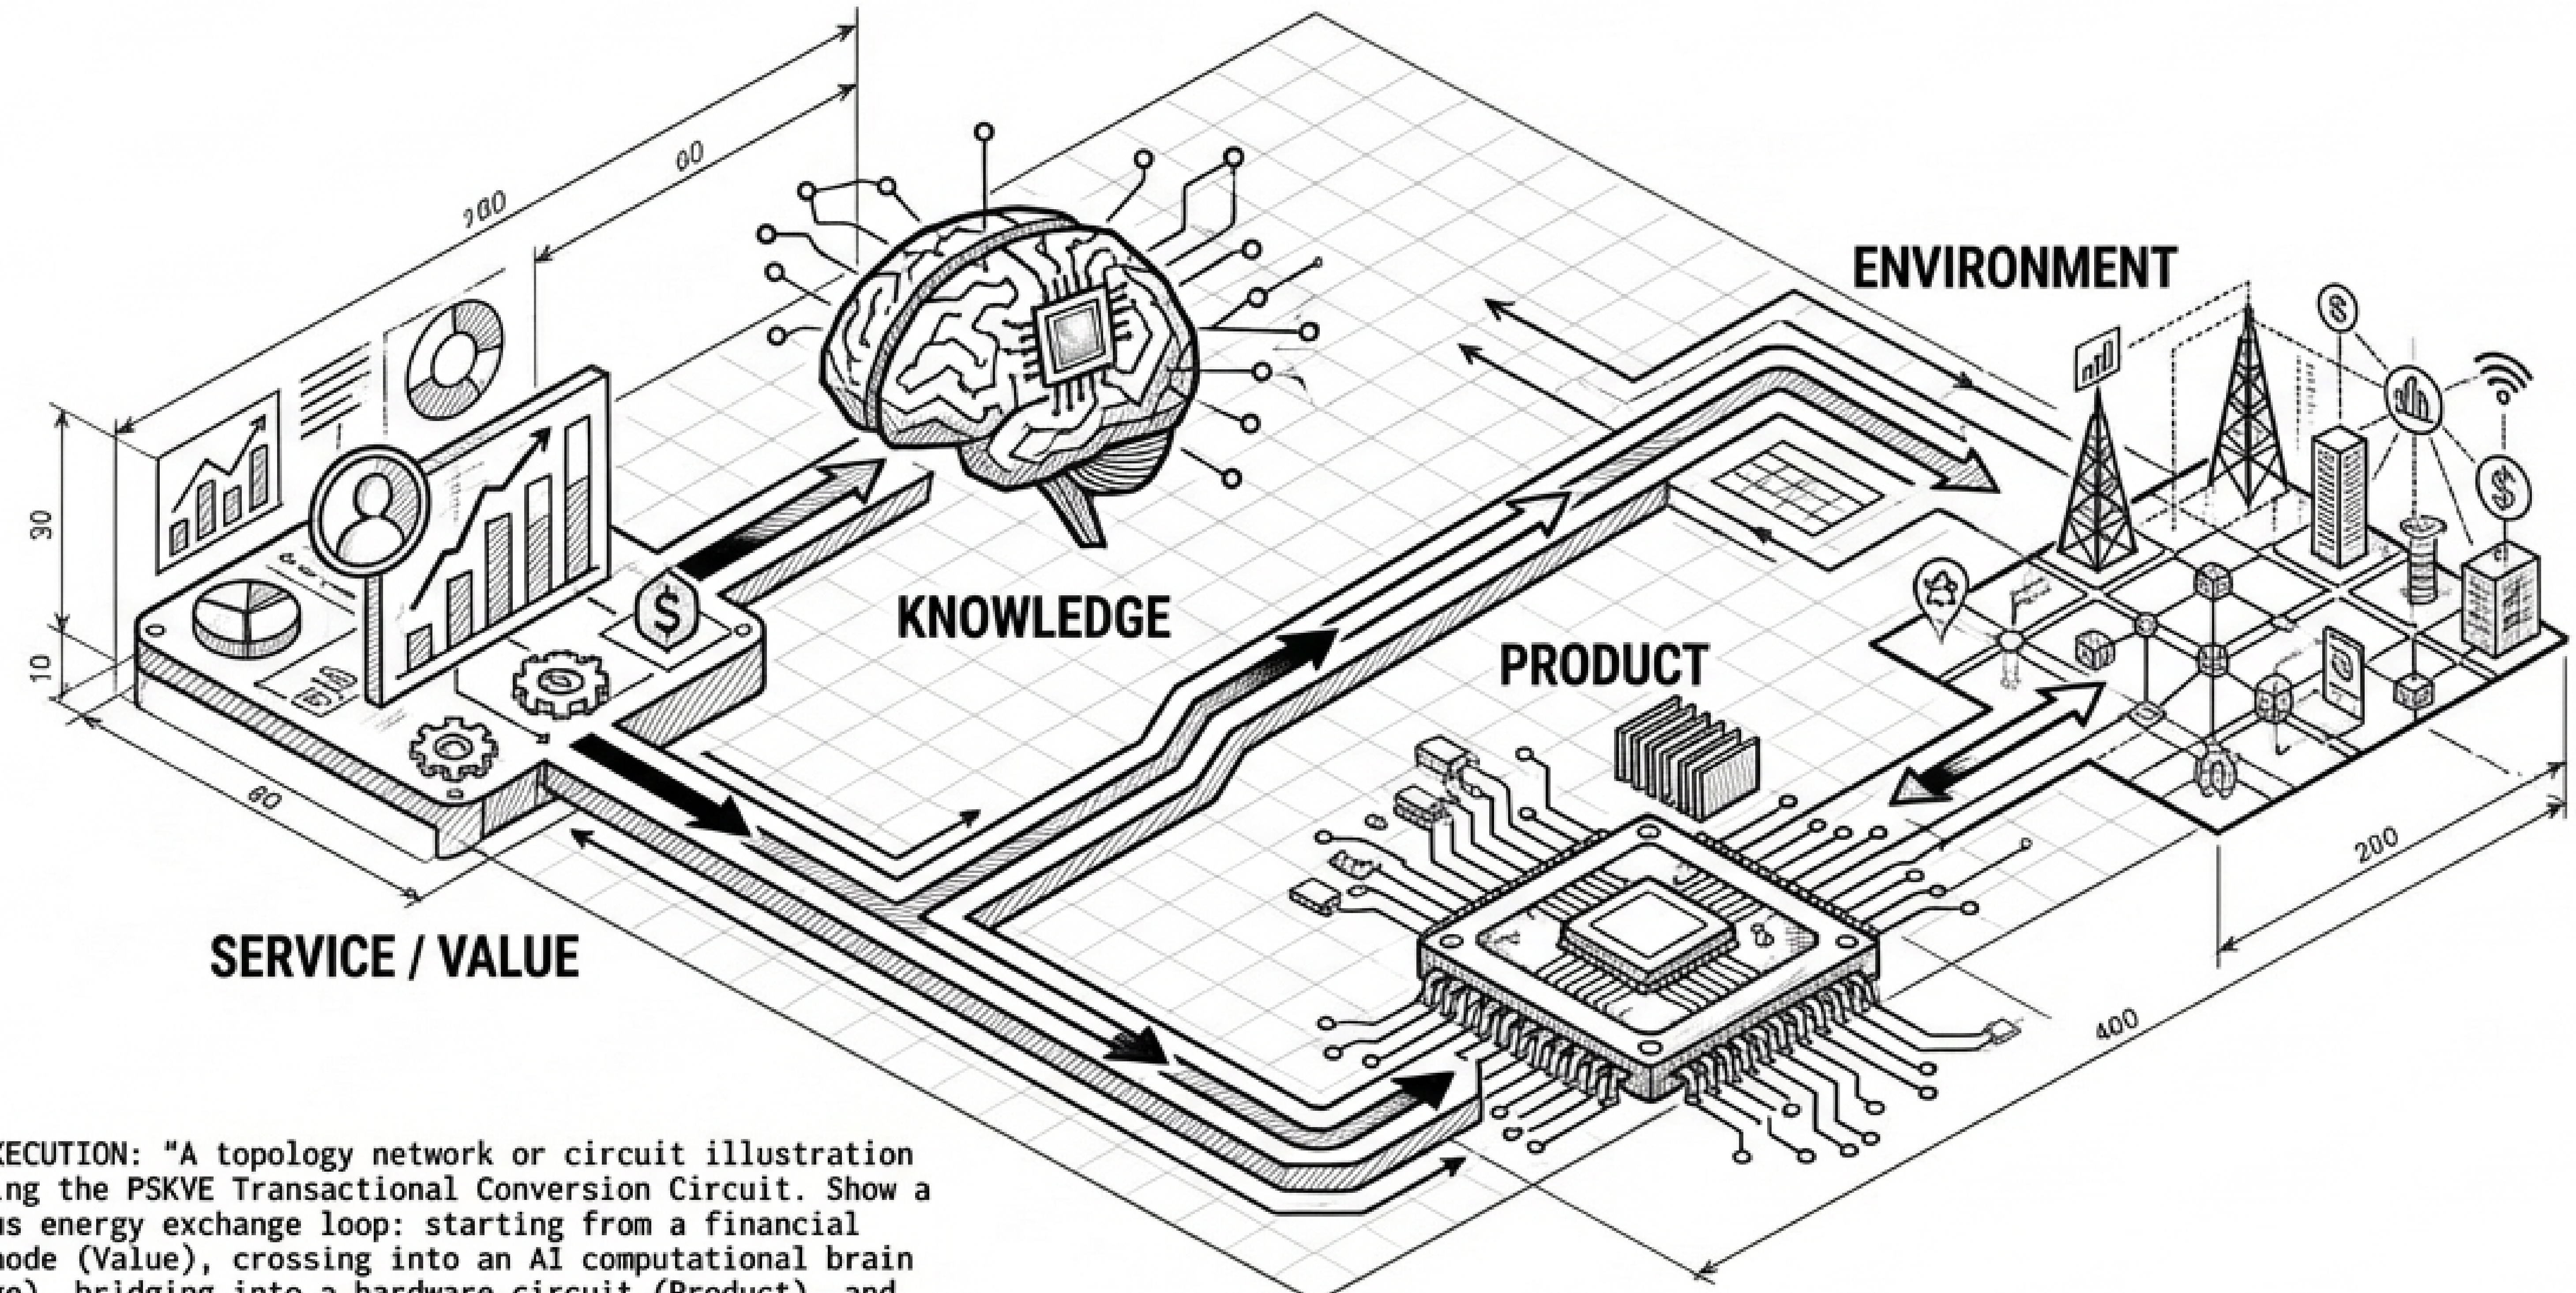
Siklus PUDAL memutar aliran data dan memori tanpa henti



PROMPT EXECUTION: "A circular schematic chart depicting the PUDAL Cognitive Cycle (Perceive, Understand, Decision, Act, Learn). Use continuous circular arrows demonstrating the endless rotation of data flow and memory updates. Style: circular flowchart, technical UI/UX design, minimalist, high-resolution for a systems engineering textbook."

NotebookLM

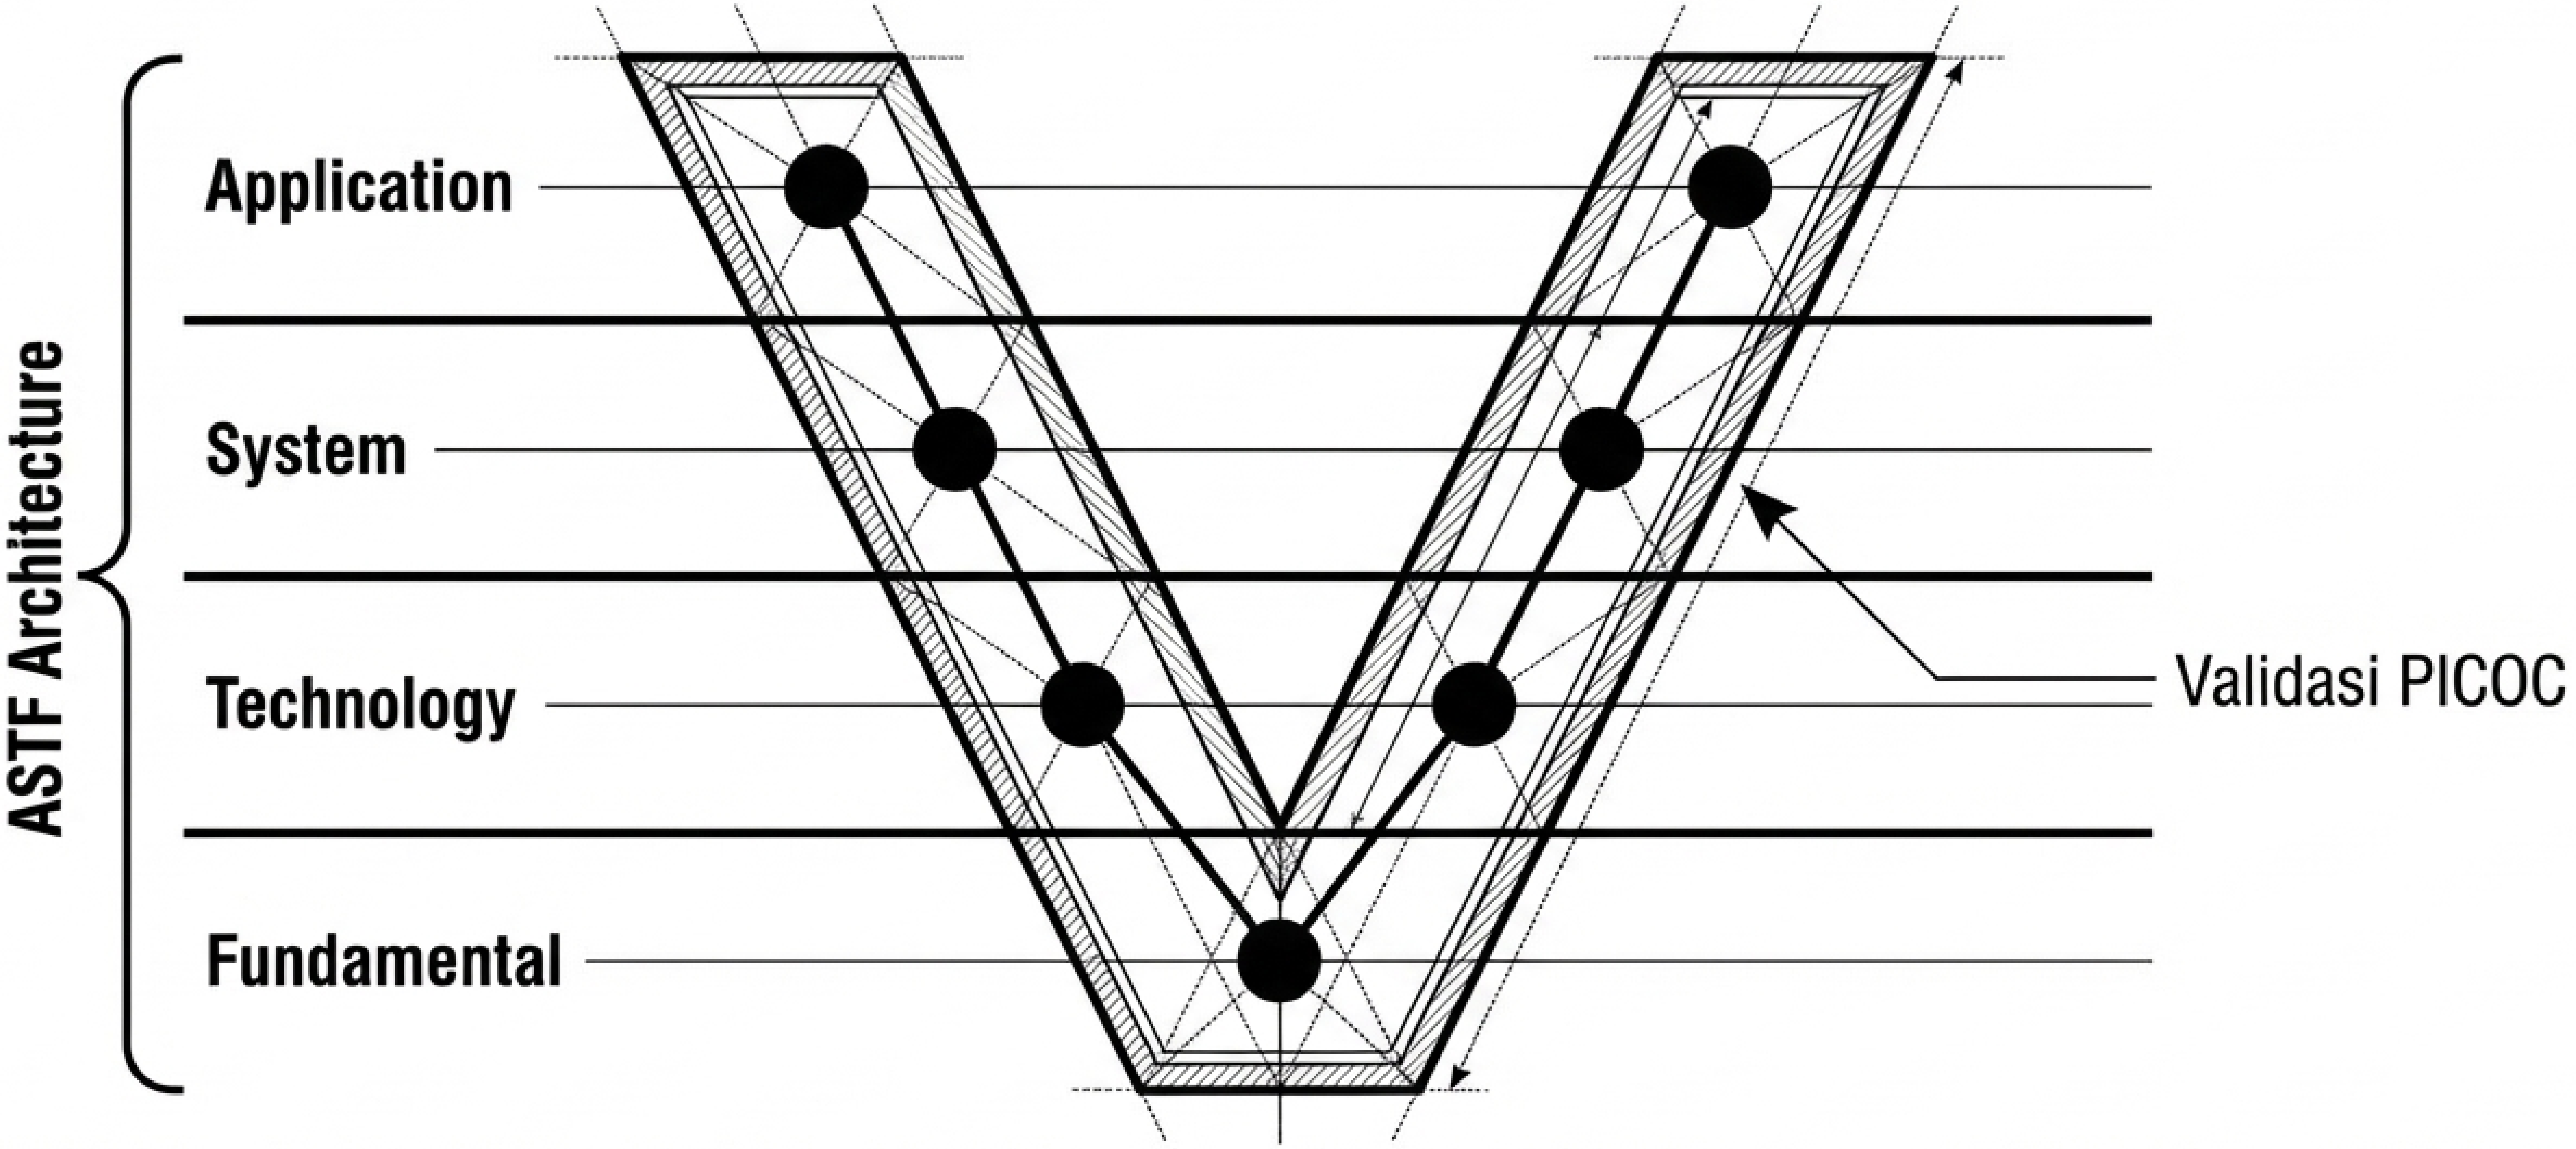
Sirkuit PSKVE mengonversi layanan menjadi nilai lingkungan



PROMPT EXECUTION: "A topology network or circuit illustration visualizing the PSKVE Transactional Conversion Circuit. Show a continuous energy exchange loop: starting from a financial capital node (Value), crossing into an AI computational brain (Knowledge), bridging into a hardware circuit (Product), and ending in a smart city/society ecosystem grid (Environment). Style: node-link network architecture, technical isometric illustration."

NotebookLM

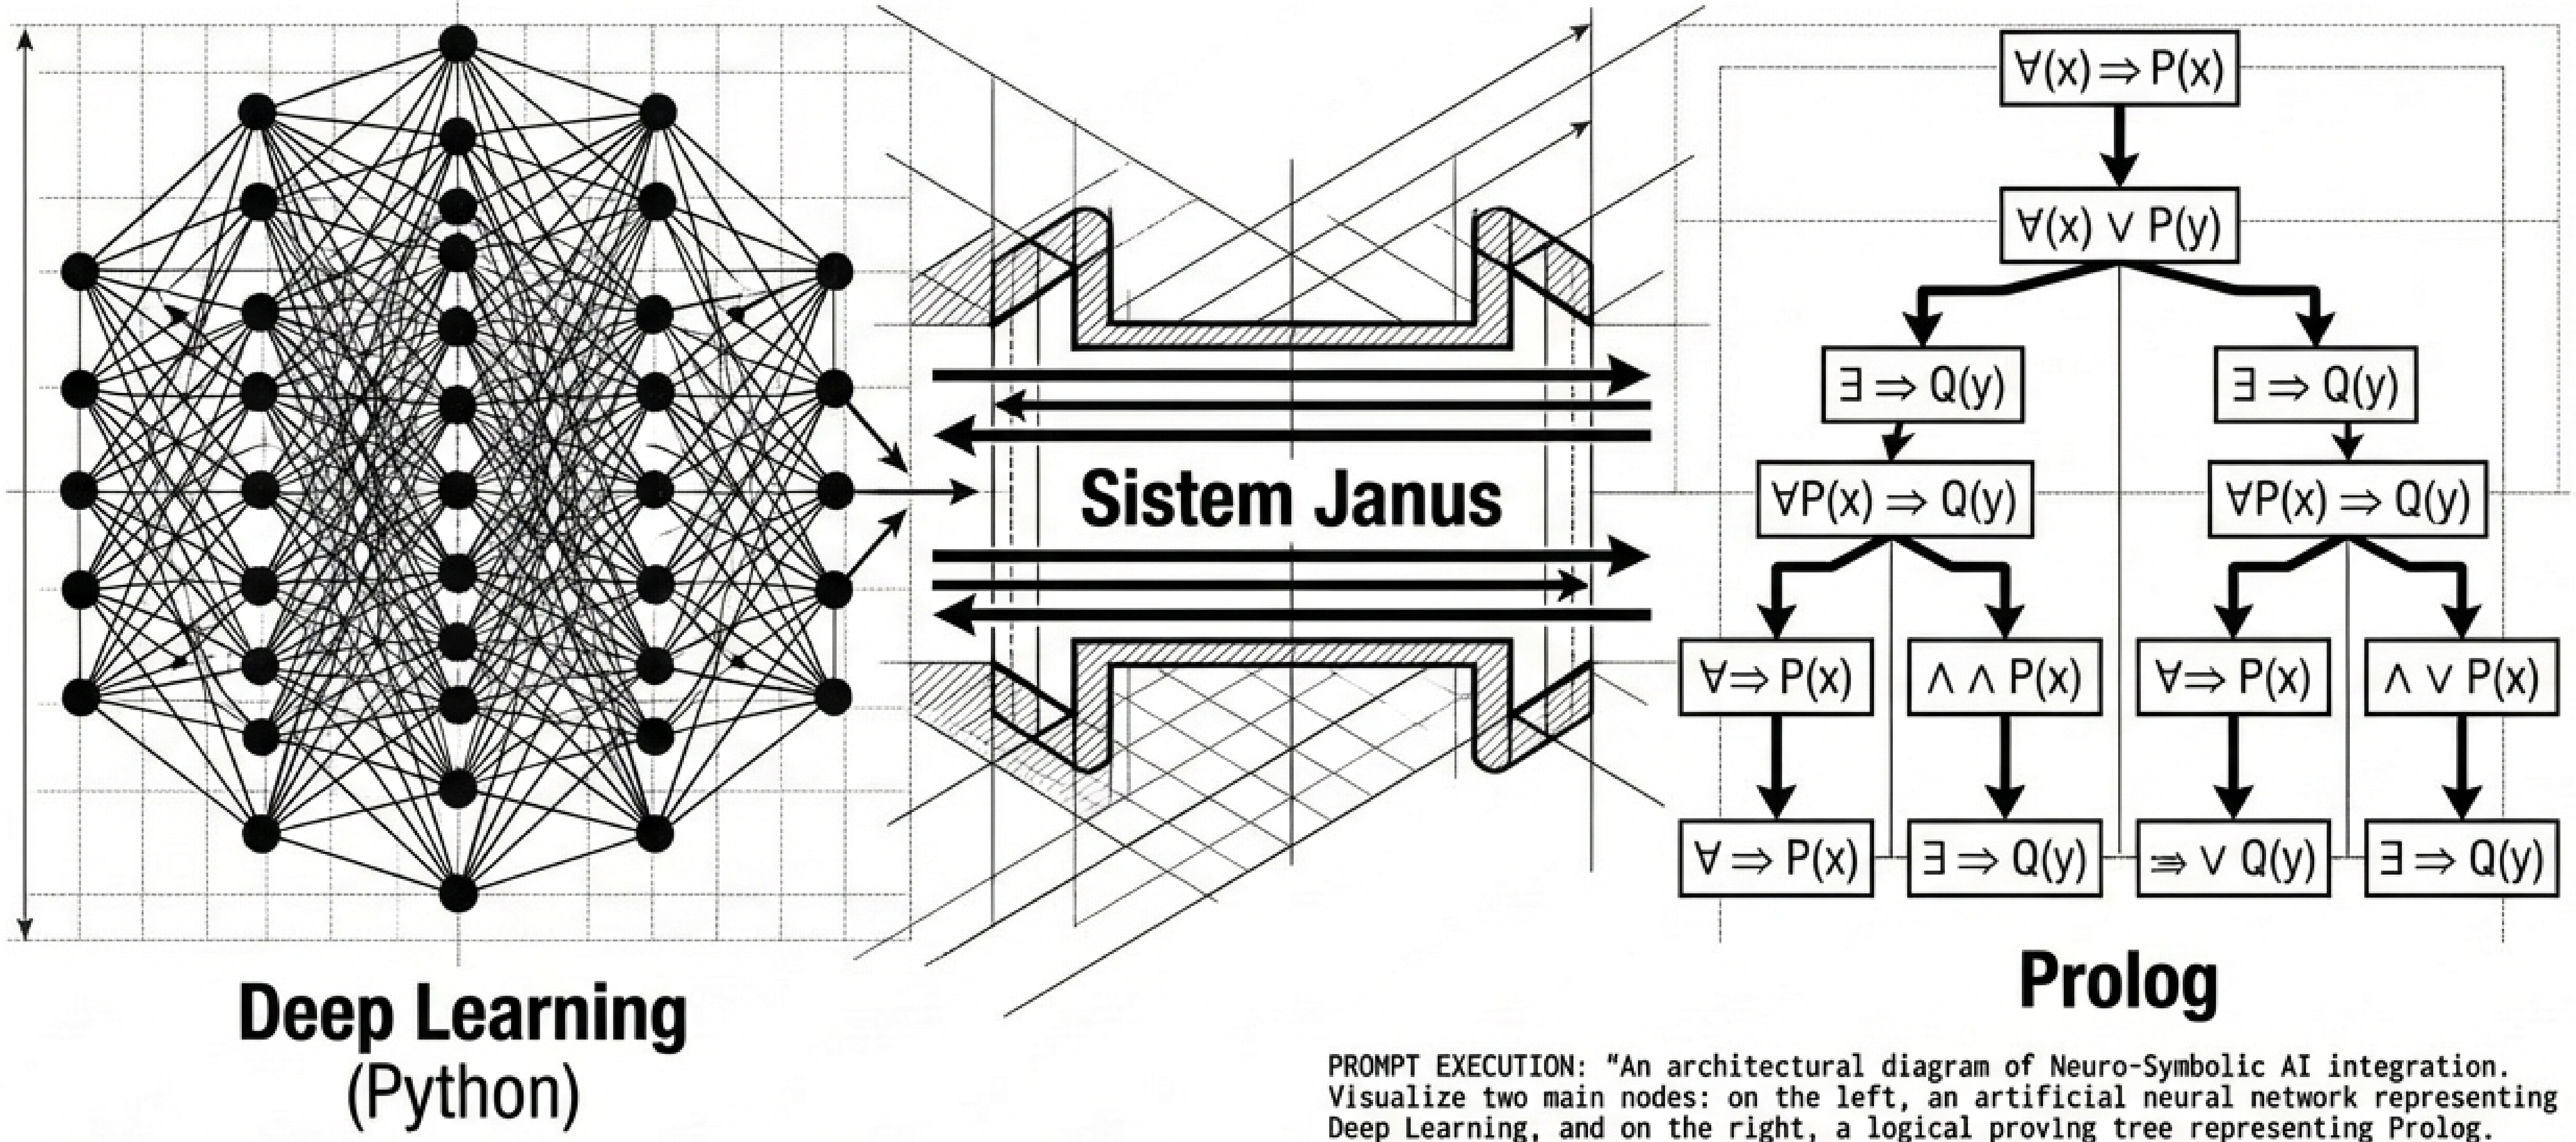
Validasi PICOC memastikan ketahanan arsitektur empat lapis



PROMPT EXECUTION: "An engineering methodology chart showing a large V shape intersecting with four horizontal layers representing ASTF Architecture. Add solid nodes at each intersection representing iterative PICOC validation points. Style: technical matrix diagram, visual representation of systems engineering, clean, geometric, university textbook style."

NotebookLM

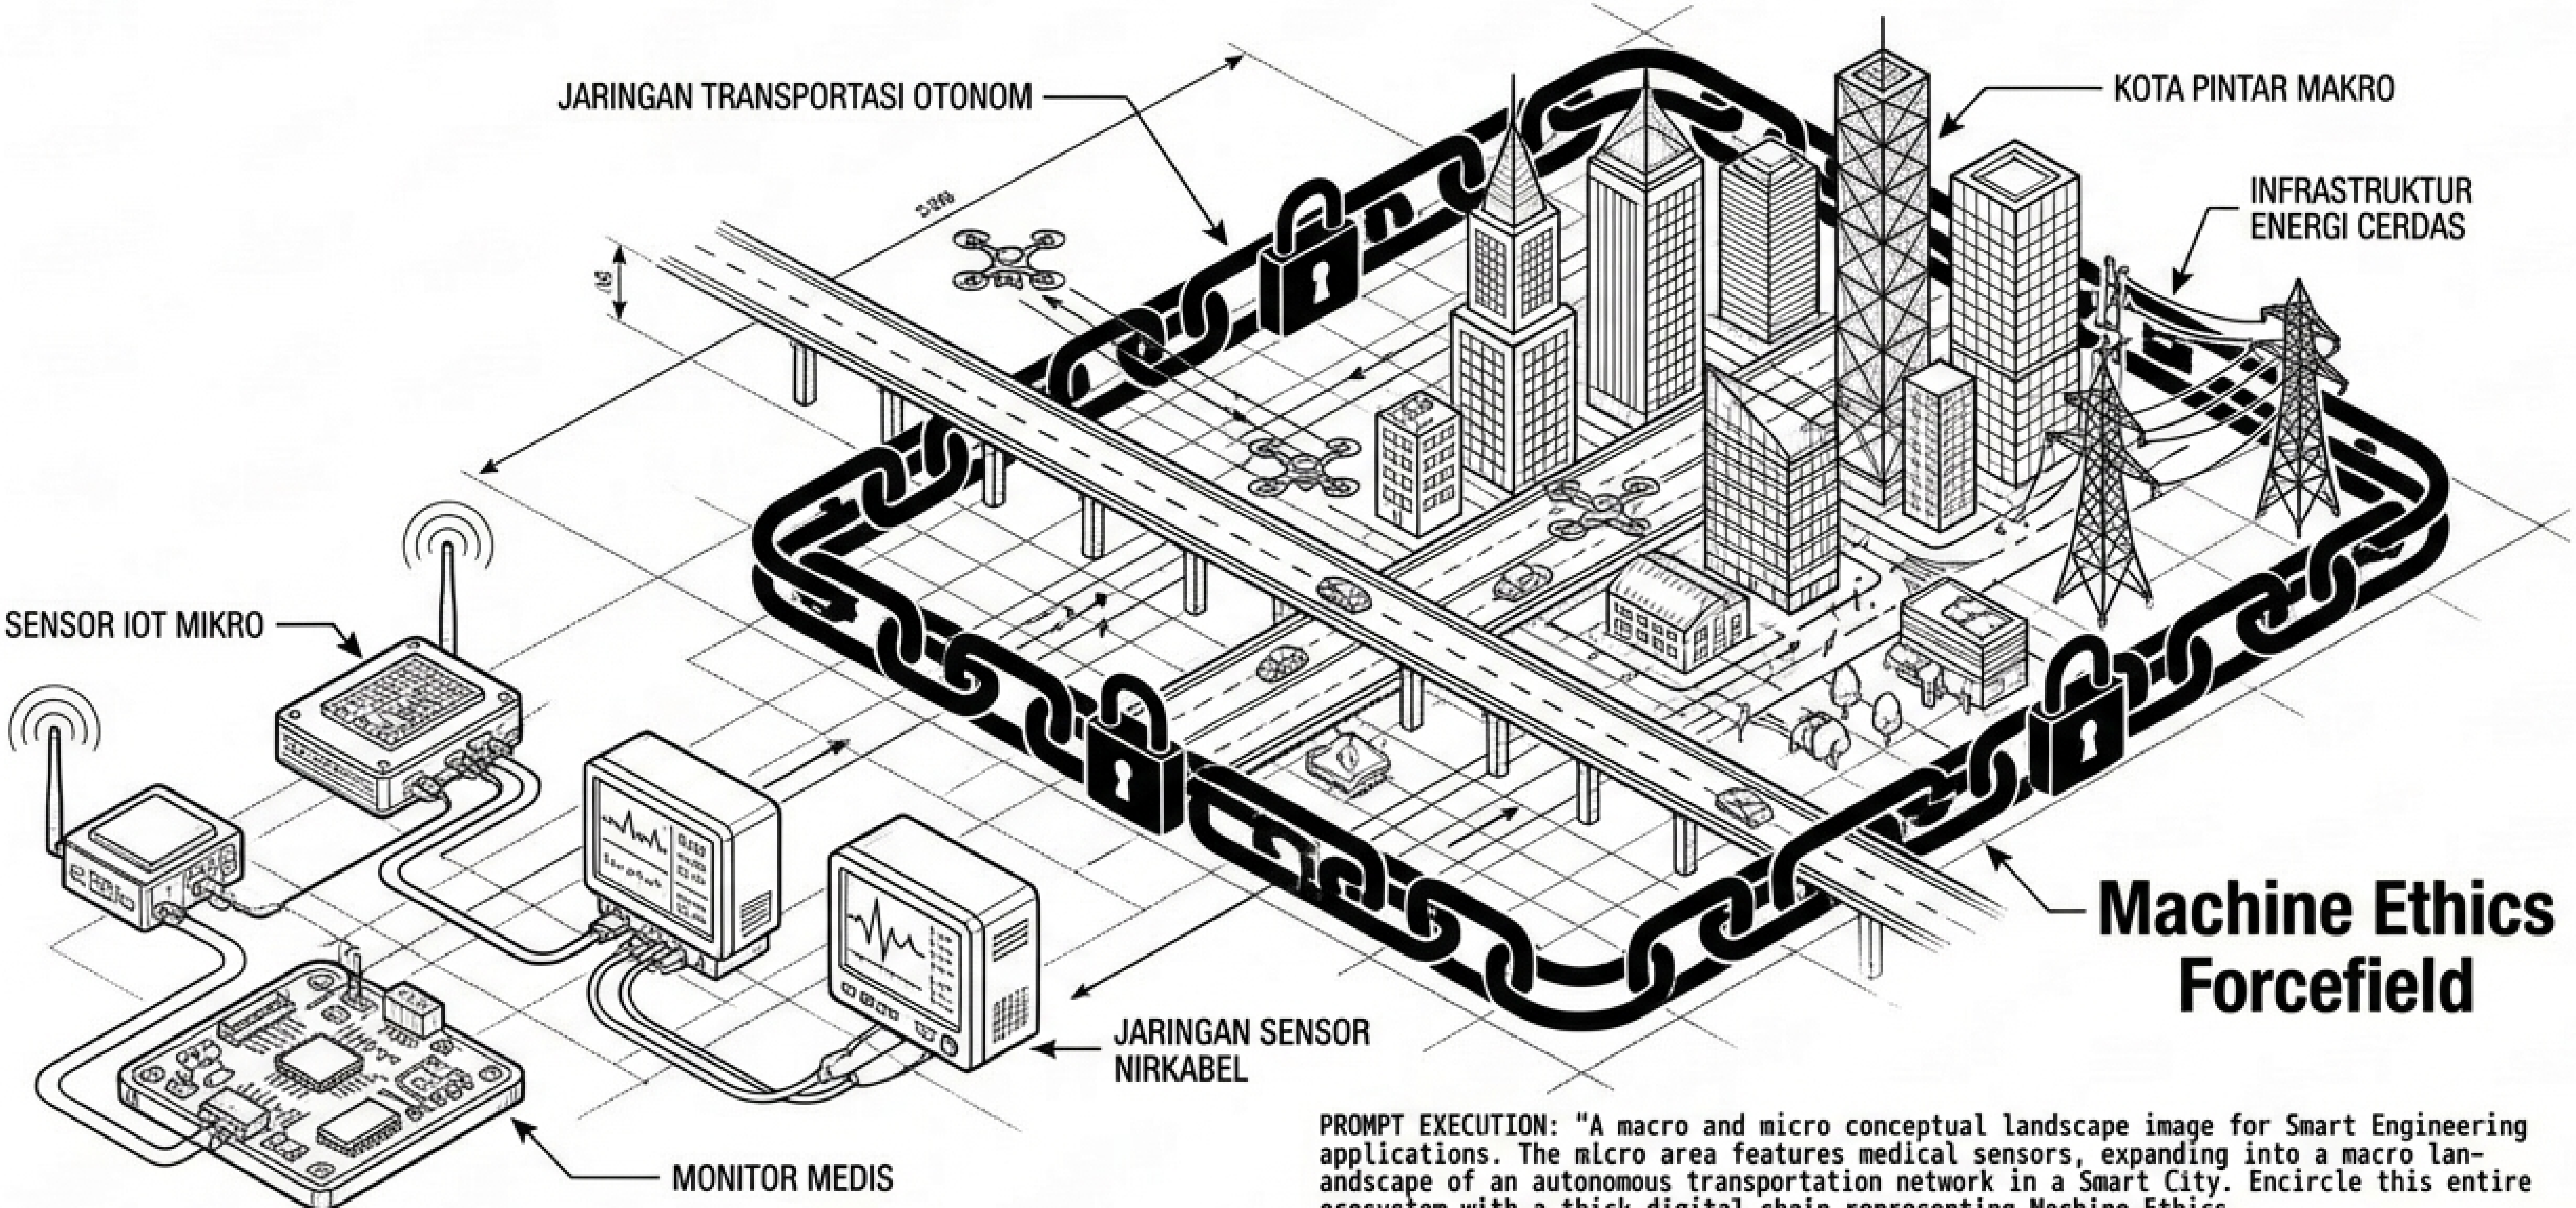
Sistem Janus menjembatani intuisi jaringan dan logika simbolik



PROMPT EXECUTION: "An architectural diagram of Neuro-Symbolic AI integration. Visualize two main nodes: on the left, an artificial neural network representing Deep Learning, and on the right, a logical provıng tree representing Prolog. Connect them with a two-way data exchange bridge representing the Janus System. Style: computer system diagram, academic block diagram, pure monochrome."

NotebookLM

Etika mesin merantai seluruh skala ekosistem makro dan mikro



PROMPT EXECUTION: "A macro and micro conceptual landscape image for Smart Engineering applications. The mlcro area features medical sensors, expanding into a macro lan-andscape of an autonomous transportation network in a Smart City. Encircle this entire ecosystem with a thick digital chain representing Nachine Ethics. Style: city-scale isometric, technical sci-fl, modern engineering textbook illustration."

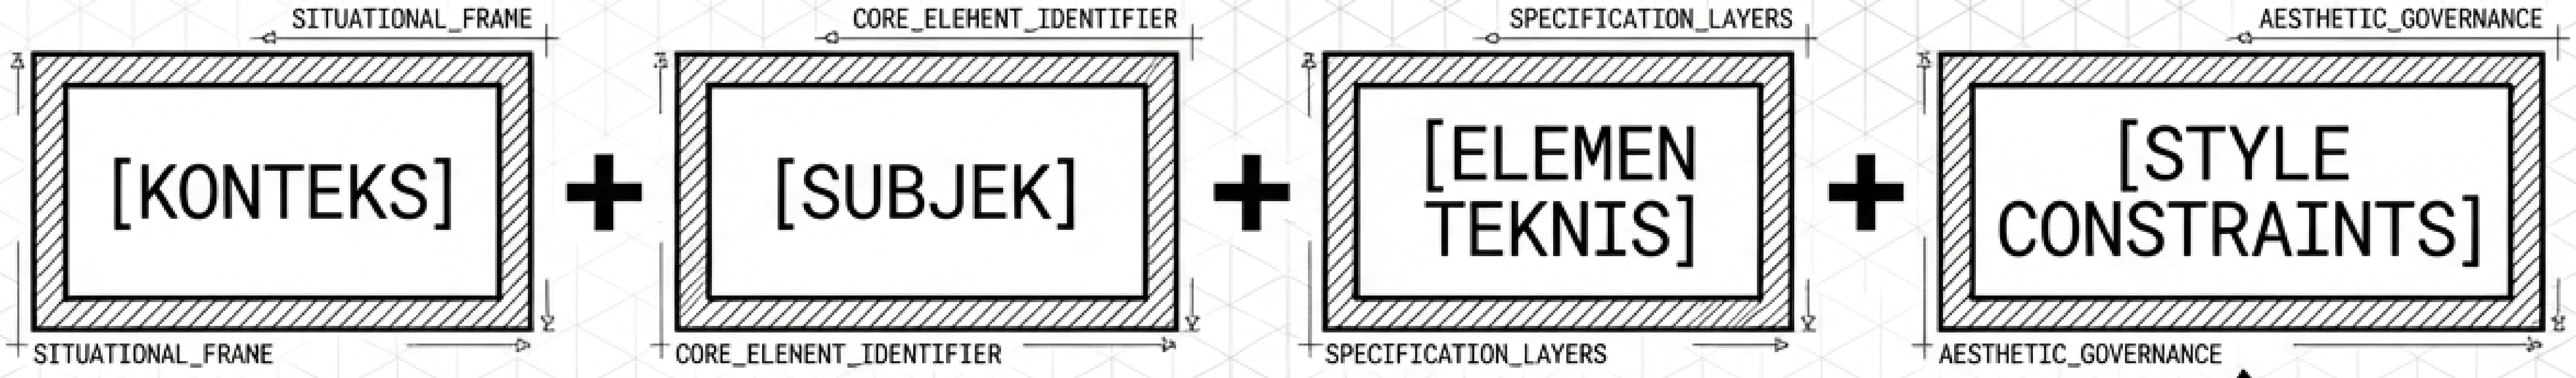
MACHINE_CODE_X004 // ACADEMIC_PRECISION_PROTOCOL // PROMPT_ENGINEERING_REV.A

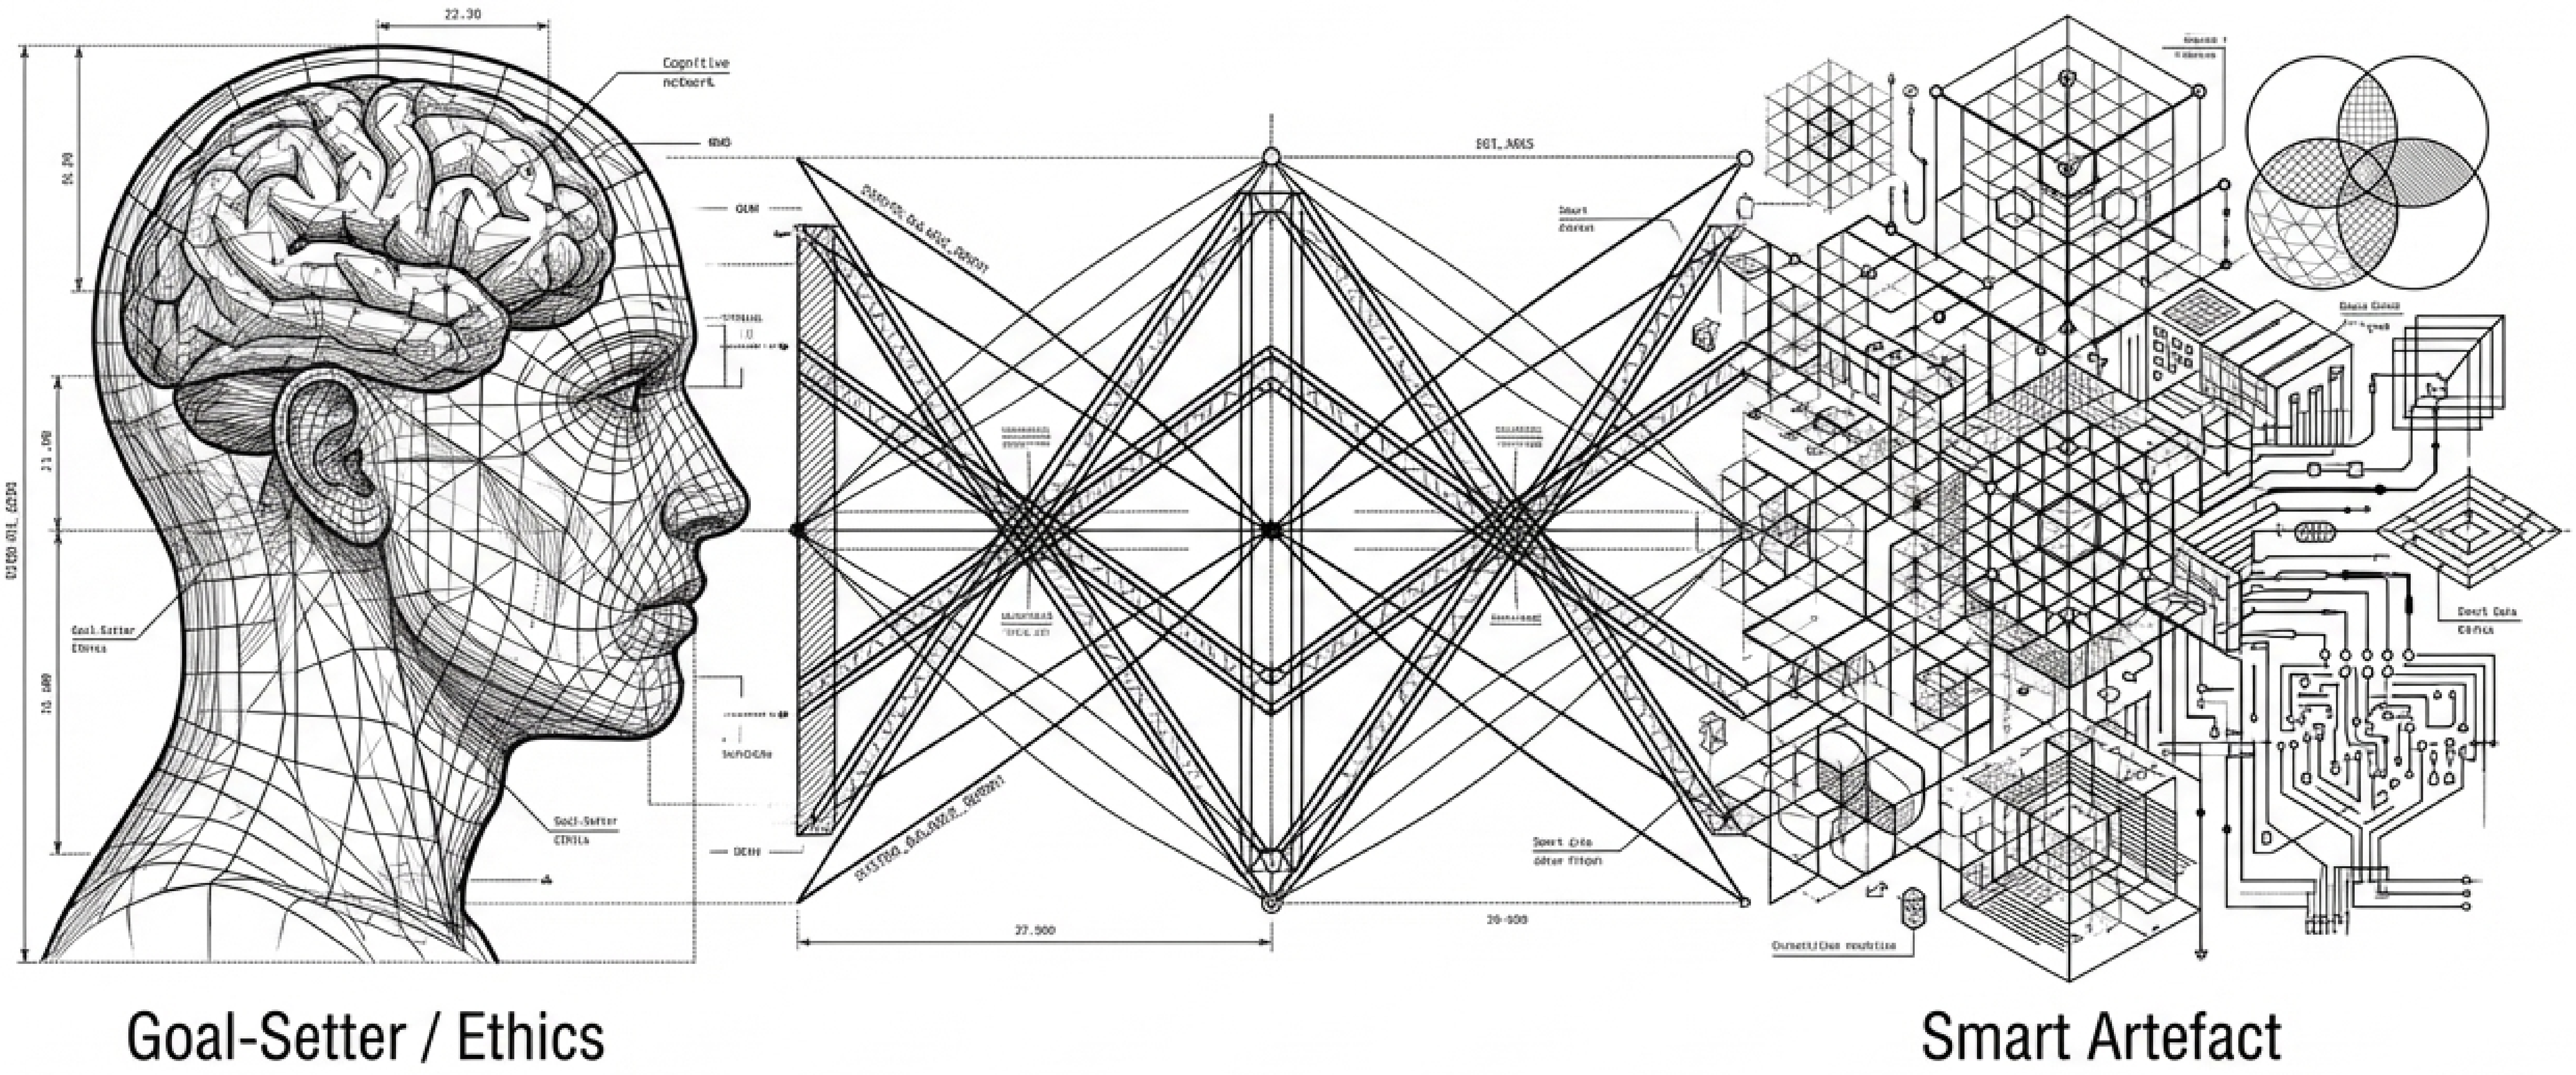
Anatomi prompt instruksi untuk presisi visual akademik



Parameter gaya harus dieksekusi dalam bahasa Inggris. Frasa ‘academic textbook illustration, clean vector style’ adalah batasan yang mencegah generator AI merender gambar menjadi hiper-realistis atau **terlalu artistik**, menjaga tingkat abstraksi intelektual yang ketat.

NotebookLM

Desain sistem bertumpu pada kejelasan niat dan kapabilitas mesin



Rekayasa Sistem Cerdas bukan sekadar soal merakit komponen komputasi, melainkan mendesain ko-kreasi yang seimbang antara parameter etika manusia dan kapasitas eksekusi mesin tanpa batas.
